

JavaScript Functions Practice Tasks

Level 1: Basic Functions

1. Create a function that takes a name and returns a greeting message.
 2. Create a function that takes two numbers and returns the larger one.
 3. Create a function that takes a birth year and returns the age.
-

Level 2: Temperature Conversion

4. Create a function that converts Celsius to Fahrenheit.
 5. Create a function that converts Fahrenheit to Celsius.
 6. Create a function that converts Celsius to Kelvin.
-

Level 3: Conditional Logic

7. Create a function that returns:
 - o "Cold" if temperature is below 15°C
 - o "Warm" if temperature is between 15°C and 30°C
 - o "Hot" if temperature is above 30°C
 8. Create a function that returns the BMI category:
 - o Underweight
 - o Normal
 - o Overweight
 - o Obese
-

Level 4: Introduction to Closures

9. Create a function that stores a password internally.
Return another function that checks whether the entered password is correct.

Example:

```
const checkPassword = createPasswordChecker("1234");
```

```
checkPassword("1234"); // Access Granted
```

```
checkPassword("1111"); // Access Denied
```

10. Create a function that tracks login attempts.

Example:

```
const login = createLoginTracker();
```

```
login(); // Attempt 1
```

```
login(); // Attempt 2
```

```
login(); // Attempt 3
```

Level 5: Advanced Closures

11. Create a function that maintains a private cart count using closures.

Requirements:

- Add item
 - Remove item
 - Get current item count
-

Level 6: Real-World Problem Solving

12. Create a function that simulates an ATM withdrawal.

Requirements:

- Check current balance
- Check withdrawal amount
- Return remaining balance
- Return an appropriate error message if the withdrawal cannot be completed
